

Performance improvements:

- For all types of product search
- For handling filter panels. Filter panels in combination with text search will have much higher performance. Filter panels inside VP products will have the same functionality and performance as filter panels connected to product tree nodes.
- For basket handling and add to basket function.

Spare Parts management improvements

Parttrap® Spare Parts Management is a convenient solution for keeping all spare parts information up-to-date and made available online via clickable pages and hotspots in diagram books. We've now added new hotspot types such as graphic objects and images and new action types, such as open content unit.

Store Locator *improvements*

Now it's also possible to manage store information directly in Studio, instead of reading from ERP.

Store Pickup

requires Store Locator add-on

In Studio you can select which of your distributors that also act as pickup points. When B2C customers checkout they select at which store they want to collect their goods.

features

Display total weight in checkout

It is now possible to add fields in checkout in order to display total weight of the ordered items: One information field and one field with the weight.

Manage your own delivery addresses

New section with the possibility to manage your own delivery addresses directly in the site instead of in Studio. These addresses are only stored in ONE and complement the delivery addresses from ERP.

Edit total order discount *for iScala integration*

If the new privilege Edit Head Discount is activated there will be a possibility to enter a total order discount in the basket and recalculate the total order sum. Currently only working for integration with iScala ERP.

Show message for next discount level

Now it is possible to activate functionality to show a message to the user that if they order X items more, they will get a higher discount. For example, if the customer orders 4 of an item and 5 will get a higher discount, there will be a message shown.

Order information:

Export order to Excel

Export order to Excel

In the Order Detail Page there is now a button for exporting the order into Excel-format.

Save attachments for orders

There is now a site privilege, "EnableAddOrderAttachment", which will enable the user to attach documents with the order. Those documents will be shown in Order Details.

Content unit versions

It is now possible to make versions of content units. This was before only possible to do with pages. When making a new page version you are given the option to also create a versions of the included content units.

Copy Page Version

Previously you could only copy the default page in Studio > Content > Pages, now you can also copy the page version by clicking on the copy icon - the page will be added to the list of versions.

Also copy  content units?

Copy Page and units

When copying a page you are now given the option to also make a copy of the included units. When doing this you also have the possibility to add a prefix after the original name of the units.

Enhanced URL display for SEO purposes

A link inside a content unit is now created with the same url as linking from the navigation.

Support for Robots.txt for SEO purposes

Previously, the contents of Robots.txt was hard-coded. Now it is possible to set the contents of the file in the system setting "RobotsTxtContent".

Search feature for document list

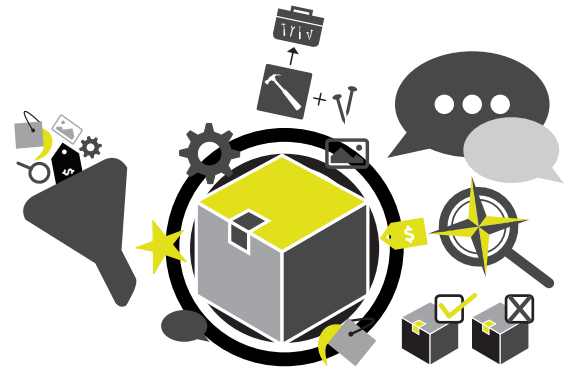

In the *Document List* section there is a new setting - "Searchbox". If set to yes it's possible to search on document names in the document list on the site. (This is not an option for *Product Documents* section).

Products

New privileges for quantity per package

New privileges "Qty Per Package Option 1" and "Qty Per Package Option 2" have been introduced in order to handle quantity per package. In previous versions this was a system setting.

Ship To ERP bug in Studio for iScala

Problem in Studio when selecting Ship To Addresses and using Address Restriction now fixed.

Attribute values connection to a large number of products

In Studio, it is now possible to connect an attribute value to more than 350 products in one transaction - which was the limit before.

Filter panel condition check

When adding nodes in Condition for a filter panel, there is now a check if the nodes are already connected to other filter panels. If so there is a warning message informing that the nodes are not saved because of this.

Privilege "Edit only own language"

This privilege was introduced in version 3.2, but now also affects translation of Product Name for VP.

Warning when removing attributes

If you try to delete an attribute that is used in an attribute panel, attribute category or filter panel you will now get a warning.

Deleting a catalog node with children

When deleting a catalog node with children the child nodes are now also deleted from the database table. Before they were only deleted from Studio but still had a connection to the parent node in the table.

Attribute names with "."

Attribute values for attribute names with "." can now be imported and don't cause errors.

Cart/checkout

Enhancements for privilege "Edit Line Price & Discount"

Improved function for editing price and discount per article line in basket. After clicking on Edit pen to change the price, click on check mark to save it or X to cancel the change. If the price has been edited there will be a padlock next to it to indicate this.

Spinning cursor displayed while uploading a file to cart in Checkout

Import of a cart with many products can take a long time, now a spinning cursor is shown to indicate that the system is working.

Email format validation in B2C checkout

In B2C checkout we now validate that the E-mail address contains "@" and a complete domain (for example name@domain.com and not just name.com or name@com)

Visual help in the import cart function

Besides the information text about how to import a cart, now there are also images adding visual help to understand this.

Request for quotation improvements

Button "continue to payment" hidden and replaced with "Next" button.

Two new System Settings added: "RequestQuotationEmailAddress" and "RequestQuotationEmailSubject".

Order number counter based on site role

In Studio, System -> Counters, there is now a column for Site Roles where you can link different site roles to different order number series.

User

New setting to hide price and discount in Account Details

There's now a privilege "Ability to hide price". If set, users connected to that role will see two checkboxes in the Account Detail Page: "Hide prices" and "Hide Net Price & Discount". They can be checked in order to hide the prices in the site for the user.

Improvements for Sign-up form for New Customer

Fields for Country and State added.
Country Sort Order now alphabetical.
Address fields in same order in both address sections.

New section setting to display Address in Search Customer

In the section Customer Search in the Search Customer page layout, there is now a setting "Display Address column in list". If set to Yes, an Address column with the Customer Address will be shown next to the Customer Name in Customer Search.

Content

Selecting images in content units

In Studio, when browsing for images to upload inside a content unit - you can now click the entire row for the image to select it - not only the check-box circle.

Fix for one-click editor

Pop-up links no longer destroyed when saving in one-click editor.

Navigation Node Link Type

When editing a navigation node, now you have the same four options for Link Type as for creating a navigation node: No link, Internal, External and Popup.

Fix for Layout theme before login

Before certain pages, such as "reset password" were displayed with the layout theme set as default. Now, when a user is not logged in - these pages get layout theme "default theme before login" if there is one.
